

# Symposium: Medical Device and Health Technology Assessment

Since the establishment of the Biomedical Discipline by the Hong Kong Institution of Engineers (HKIE) in 2004, the status of biomedical engineers in Hong Kong has been recognized and raised. With growing demand for health services and the continuing economic crisis, difficult decisions are required about priorities, investments and disinvestments in health care. Health technology assessment (HTA) plays a key role and is important not only to biomedical engineers, but also regulatory specialists, healthcare professionals, medical and healthcare device industrialists, distributors, importers, traders and researchers, in their decision-making on health and medical devices issues.

Following the successful 3-day BME2012 International Conference in December 2012, this symposium aims to focus on medical device and health technology assessment, providing participants a whole scene with critical information for the related biomedical engineering technology, safety standards, risk management strategies, technology assessment and their correlations, highlighting HTA, a multidisciplinary field of policy analysis studying the medical, social, ethical, and economic implications of development, diffusion, and use of health technology, to cover a wide range of healthcare issues including prevention and rehabilitation, vaccines, pharmaceuticals and devices, medical and surgical procedures, and the systems within which health is protected and maintained.
